MARINE POLLUTION: Ocean Dumping. September 12, 2012 7:04 AM 7 9:41 AM

Government. September 24, 2012 <http://www.gc.noaa.gov/gcil_mp_ocean_dumping.html>.

Main Ideas Questions Key Words	Page # <small>**no page # for websites</small>	Summary? Paraphrase? Quote?	Notes/Details
Government Protection		Paraphrase	The U.S. Government is using new laws to prevent the waste disposal in the oceans, and so is London. They are trying to get as much protection for the oceans as possible.
Research		Quote	“Obligation has been delegated to NOAA, with monitoring and researching ocean dumping activities, as well as conducting research on the possible long-term effects of pollution, overfishing, and man-induced changes in ocean ecosystems”
Reason		Summary	Since the 1970s, many countries have used the oceans as a place to get rid of waste piling up on land, not realizing the impact it has on the sea creatures.

We can help		Summary	Us, as humans, are suggested to reduce the amount of waste we dispose, so we can limit it to the land, and not go to the sea for it. When we do that, we would be able to help the animals with a clean environment to live in.
Finally!		Paraphrase	After many years, the people and the government are starting to realize how dangerous the impact on sea life is. We have slowed down on disposing waste into the ocean, but it still happens.

Most important or most interesting fact learned from this source: *(required)*

The most important fact I learned is that this has been happening since 1970, and the only way to stop is for us to stop disposing so much waste.

What additional questions do you have about your topic? *(required)*

What specific animals are being affected the most?
